# Outline

- 1 Introduction
- 2 Motivation
- 3 Related Works
- 4 Aim and Objectives
- 5 Methodology
- 6 Results and Discussion
- 7 Conclusion
- 8 References

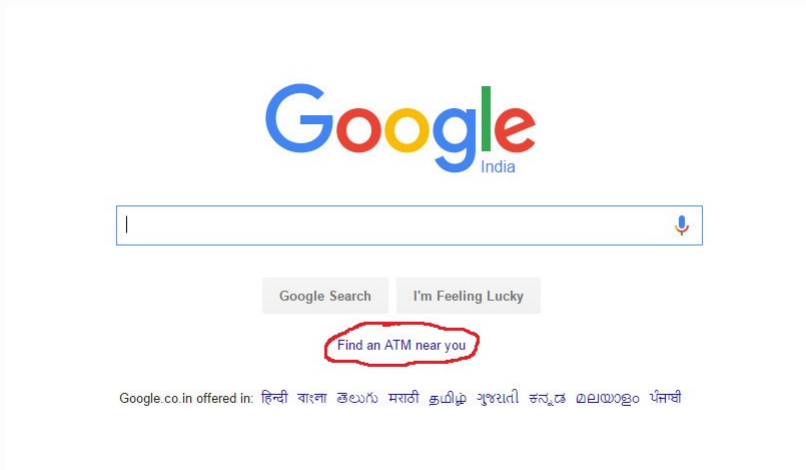

# Introduction

- Sentiment analysis means to decide the demeanor of a person or any subject regarding some point or the general logical polarity or sentiment value to a record, connection or occasion(He and Zhou, 2011).
- A sentiment is a basic piece of social media platforms and has its own particular significance.

# Motivation

- Demonetization being a controversial issue in media and society
- Impression of demonetization on Indian economy
- Media biasness on the matter
- Data abundance on twitter

# Motivation Contd...

Google India homepage during demonetization

# Related Works

Table: Literature review

SN.	Authors	Algorithm	Polarity	Data	Task
1	Pang and Lee (2004)	SVM	Pos/Neg	Movie Reviews	Sentiment Analysis
2	Cao et al. (2011)	Semantic, LSA-based	G	Software programs, users feedback	Sentiment Classification
3	Hu and Li (2011)	Graph-Based approach	Pos/Neg	Movie, Product Reviews	Sentiment Analysis

## Related Works Contd...

- Pang and Lee focused on what challenges sentiment analysis is facing and what could be the applications of them(Pang et al., 2008).
- Mahmood in 2013 investigated the tweets available on twitter to predict the winner of 2013 Pakistan elections(Mahmood et al., 2013).
- Sentiment analysis of demonetization of 500, 1000 rupee banknotes by Indian government for first 2 weeks.(Singh et al., 2017)

# Aim and Objectives

- To examine people's perception of Demonetization by parsing the tweets with respect to time(8 weeks)
- To compare public sentiments through outcomes of naive bayes and support vector machine algorithms

# Methodology

- Data extraction(using python and twitter APIs)
- Data cleaning
- Training and testing dataset
- Applying Naive Bayes and SVM
- Analyzing outcomes

# Dataset

## Dataset

# Naive Bayes

- Naive bayes is applied for evaluating the sentiment values of tweets. For k outcomes and classes, it works on following probabilistic model :

$$p(C_k / z_1, z_2, \dots, z_n)$$

- But for larger value of n above formula doesn't work well. So, bayes theorem interferences the conditional probability as :

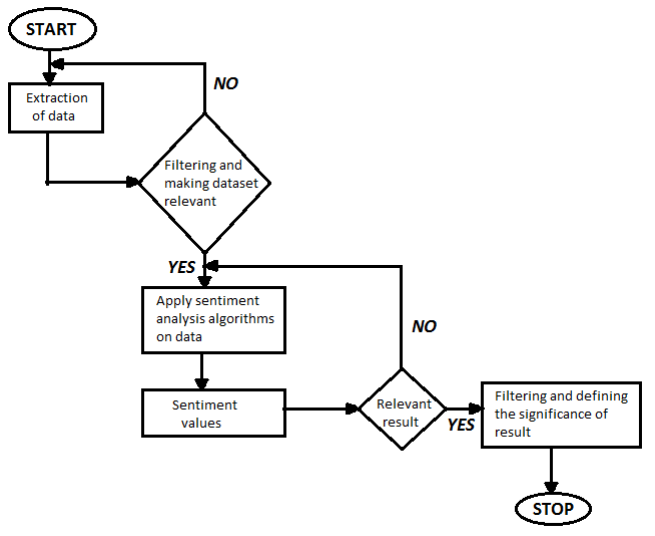

$$p(C_k/z) = p(C_k) p(z/C_k)/p(z)$$

# Support Vector Machine(SVM)

Support vector machine is a supervised ML algorithm which has the ability to linearly separate the classes by a large margin.

Positive	39.60	33.90
Negative	14.80	10.30
Neutral	45.6	55.80

# Dissemination of previous work

- Previous study(Singh et al., 2017) showed analysis for first two weeks only.
- Negative emotions diminished marginally in second week.
- Our analysis demonstrates the total open feeling over eight weeks.

# Discussion

- Consistent increment in positive sentiments
- Gradual decrement in negative sentiments
- General sentiments got cleared with time

# Conclusion

The study shows that with every passing week, negativity in the sentiments started to decrease and the number of positive responses increased.

- Privileged of our general public is supported most.
- Not fair for everyone but appreciated by upper class.
- Positive reactions of users towards demonetization.
